SUMMARY

Artificial Intelligence & Machine Learning undergraduate with a CGPA of 8.27/10, specializing in Agentic AI, Multi-Agent Systems, FastAPI, and intelligent automation. Published researcher with hands-on experience developing AI-powered applications using LangGraph, LangChain, CrewAI, and modern backend technologies. Passionate about building scalable AI solutions and contributing to innovative software engineering teams.

PROJECTS

PlacementPilot AI

Python, FastAPI, Gemini 2.5 Flash, SQLite

Live: placement-ai-pro.vercel.app | GitHub: github.com/HemalathaSV/placement-ai-pro

Built a multi-agent AI platform with 5 specialized AI agents for resume analysis, ATS evaluation, interview preparation, aptitude practice, and job recommendations.

- Designed FastAPI-based backend services to coordinate agent workflows and generate personalized career guidance.
- Structured LLM prompts to return consistent, task-specific responses across different placement modules.
- Deployed a working web application with a live demo and public source code.

CampusOS

Python, FastAPI, SQLite

Live: campusos-alpha.vercel.app | GitHub: github.com/HemalathaSV/campusos

Developed an AI-enabled campus management platform covering student records, faculty management, admissions, and notifications.

- Organized academic workflows into reusable backend modules to simplify administrative operations.
- Built REST APIs for centralized data management and future AI-assisted automation features.
- Presented the solution as a hackathon project focused on improving campus administration.

Tournament Management System

Agentic AI-Based | Python, FastAPI, SQLite

GitHub: github.com/HemalathaSV/EVO_MIND_77

- Designed an AI-powered tournament management system using autonomous agent workflows for scheduling, registration, and match coordination.
- Developed a FastAPI backend with SQLite to manage tournament operations and data.
- Integrated a natural language assistant to retrieve tournament information through conversational queries.
- Published the project in the International Journal of Creative Research and Development (IJCRT), 2025.

RESEARCH PUBLICATION

Agentic AI-Based Tournament Management System

International Journal of Creative Research and Development (IJCRT), 2025

- Published research on applying Agentic AI and Multi-Agent Systems to automate tournament scheduling, team registration, match coordination, and result management.
 - Designed a scalable architecture using Python, FastAPI, and SQLite to improve operational efficiency.
 - Explored intelligent decision-making workflows through autonomous AI agents for sports event management.
-

EDUCATION

Maharaja Institute of Technology, Mysuru

2023 – 2027

Bachelor of Engineering (B.E.) – Artificial Intelligence & Machine Learning

CGPA: 8.27/10

Relevant Coursework:

Machine Learning • Artificial Intelligence • Data Structures • Database Management Systems • Operating Systems • Computer Networks • Software Engineering

Jyothi Nivas PU College, Srirangapatna

2021-2023

Pre-University Course (PCMB)

SKILLS

AI: Agentic AI • Machine Learning • Generative AI • LLM Applications

Languages: Python • SQL • JavaScript • C • HTML

Frameworks: FastAPI • LangGraph • LangChain

Database: SQLite • MySQL

Tools: Git • GitHub • VS Code • Antigravity • Vercel

LEADERSHIP EXPERIENCE

Maharaja Institute of Technology, Mysuru | 2023 – Present

- Coordinated technical events, workshops, and department activities in collaboration with faculty and student teams.
 - Led event planning, communication, and execution while ensuring smooth coordination across organizing committees.
 - Strengthened leadership, teamwork, and organizational skills through active participation in student initiatives.
-

ADDITIONAL INFORMATION

- **Languages:** English, Kannada, Hindi
- **Certifications:** Crash Course on Python — Google
Machine Learning Pipelines with Azure ML Studio — Microsoft
- **Awards/Activities:** First Prize – Taluk-Level 100m Sprint, Karnataka (2022).
- **Portfolio:** Portfolio | <https://github.com/HemalathaSV> |
